

SUMMARY

Backend engineer building scalable, production-grade systems with Java/Spring Boot, PostgreSQL, and modern DevOps. Hands-on experience with REST APIs, real-time communication, cryptographic protocols, and infrastructure automation. Currently intern at LogiCloud.

EXPERIENCE

LogiCloud Kft. – Software Engineer (Intern)

May 2025 – Present

- Enterprise Spring Boot APIs with PostgreSQL, PostGIS geospatial optimization
- System integration: backend coordination with Android and web clients

PROJECTS

personalRedirect

Cloudflare Workers • D1 • Analytics

Production URL shortener with live analytics dashboard, detailed visitor tracking (IP geolocation, TLS, ISP), admin UI, QR generation.

map.ballabotond.com

Astro • Mapbox • React

Interactive geospatial mapping app with GeoJSON visualization, polylabel positioning, live tile rendering, responsive design.

Vortex

Kotlin • Android • Backend

End-to-end encrypted messaging application with secure communication architecture and real-time synchronization.

Aether

Backend • DevOps • Production

Backend tool built and actively used in production, demonstrating real-world reliability and maintainability standards.

TECHNICAL SKILLS

Languages & Frameworks

Java 17+, Spring Boot, Node.js, React, TypeScript

Databases & Infrastructure

PostgreSQL, PostGIS, Docker, Linux, GitHub Actions

Architecture & Protocols

REST APIs, WebSocket, TLS/SSL, cryptography (X25519, AES-256-GCM), Maven, Git

Specializations

Backend systems design, API development, real-time communication, deployment automation

EDUCATION

BSc Computer Science – University of Pécs | Graduating June 2026
